

# The c-Bridge™

## System Examples

# The c-Bridge™

## System Example – IP Site Connect 30-Repeater System

c-Bridge. Connect to Repeaters via IP Network Connections

**NOTE** - The c-Bridge™ Servers and Gateways pass Voice traffic and all MOTOTRBO™ data types.

# The c-Bridge™

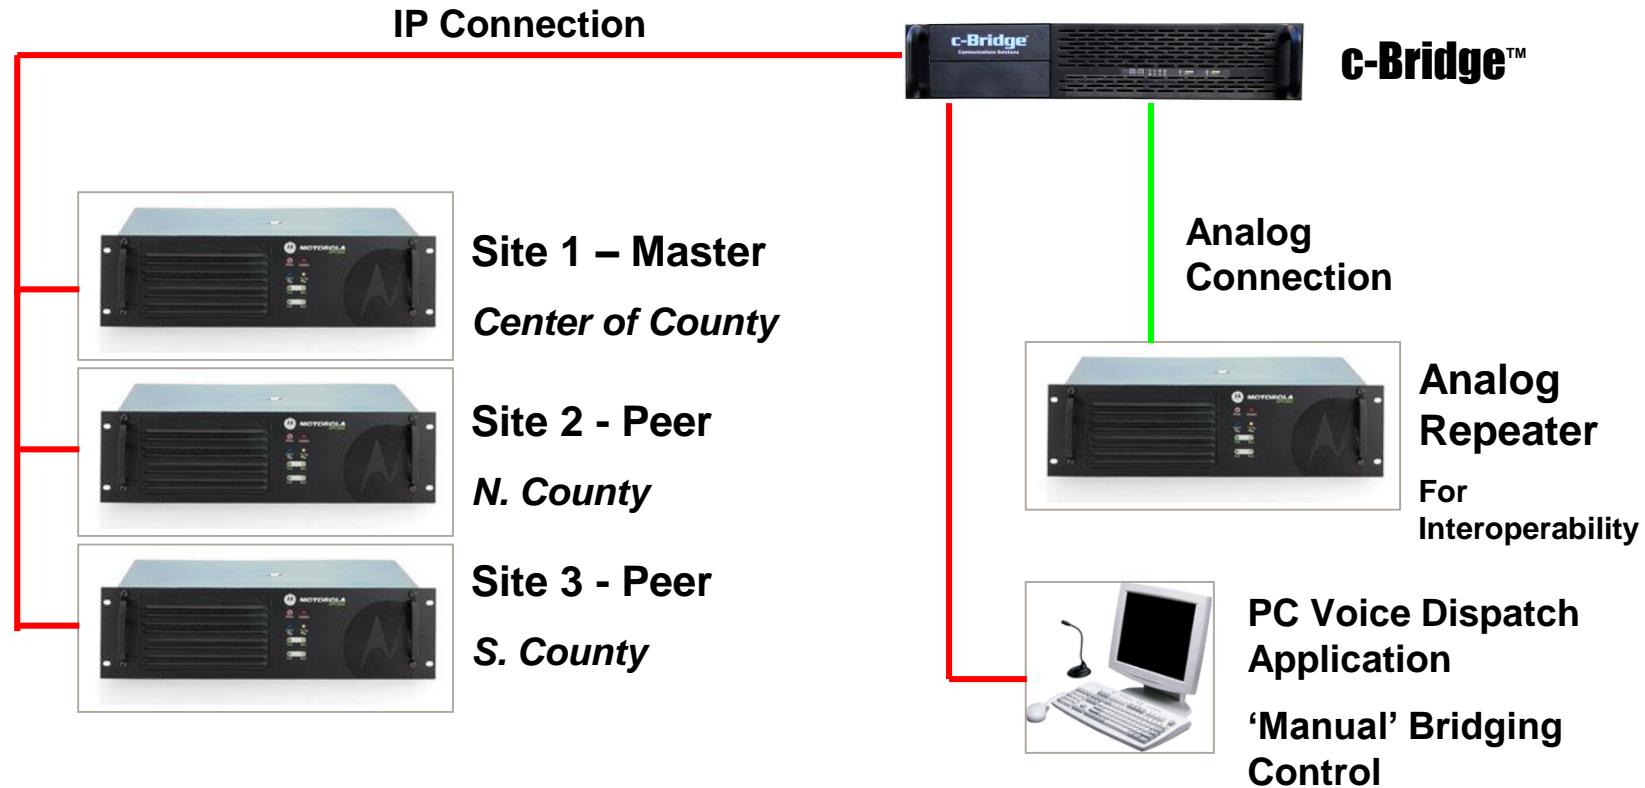

## System Example – IP Site Connect Analog Interoperability and Digital Voice Dispatch

**c-Bridge.** Connects to Digital Repeaters via IP Network Connections

**c-Bridge.** Connects to PC via IP Network Connection

**c-Bridge.** Connects to Analog Repeater via Analog Interface on c-Bridge.

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with non-**MOTOTRBO™** systems. NO data capabilities exist when bridging to non-**MOTOTRBO™** radio systems or consoles

# The c-Bridge™

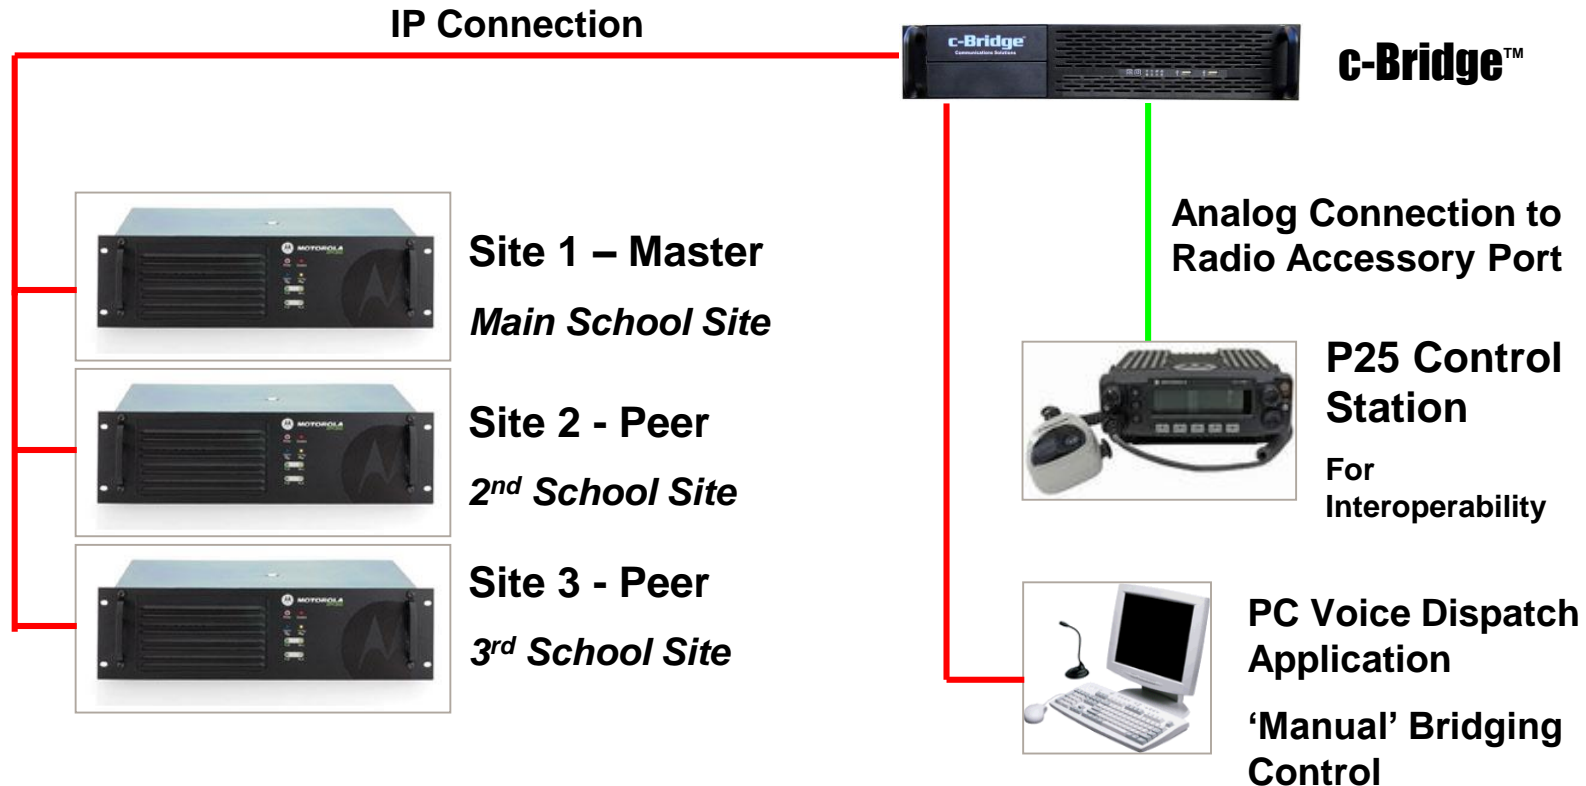

## System Example – IP Site Connect P25 Interoperability and Digital Voice Dispatch

**c-Bridge.** Connects to Digital Repeaters via IP Network Connections

**c-Bridge.** Connects to PC via IP Network Connection

**c-Bridge.** Connects to Analog Repeater via Analog Interface on c-Bridge.

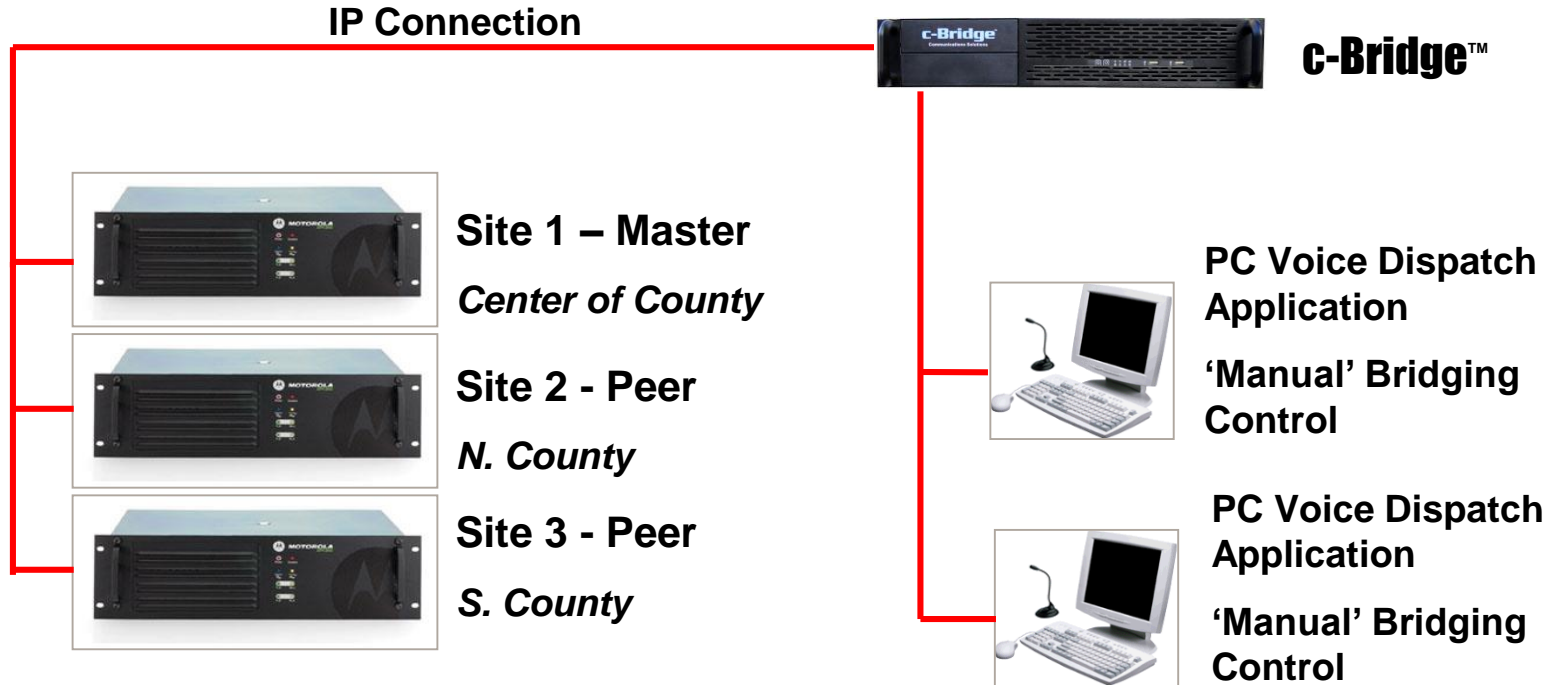

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with non-**MOTOTRBO™** systems. NO data capabilities exist when bridging to non-**MOTOTRBO™** radio systems or consoles

# The c-Bridge™

## System Example – IP Site Connect PC Voice Dispatch

**c-Bridge.** Connects to Digital Repeaters via IP Network Connections

**c-Bridge.** Connects to PC via IP Network Connection

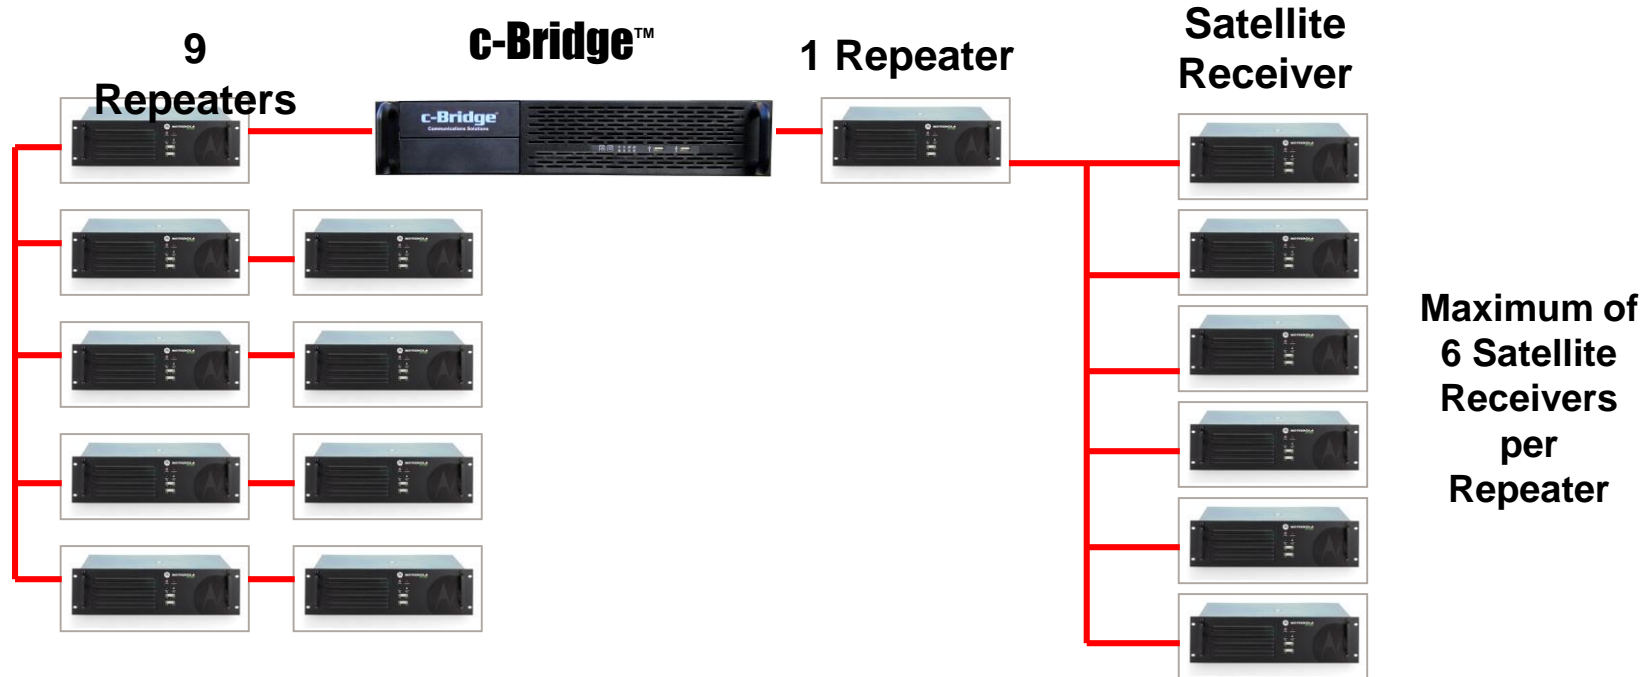

The **c-Bridge™** can be used as an “IP Gateway”, allowing for IP-based Remote Voice Dispatch, where control stations or tone-control systems are not needed

# The c-Bridge™

## System Example – IP Site Connect Receiver Voting System with a c-Bridge™

c-Bridge. Connects to Digital Repeaters via IP Network Connections

**A c-Bridge™ can be used to expand this limit to 6 Satellite Receivers per Repeater**  
**We could even have up to 50 Repeaters Configured in this way, with up to 6 Satellite Receivers per Repeater**

# The c-Bridge™

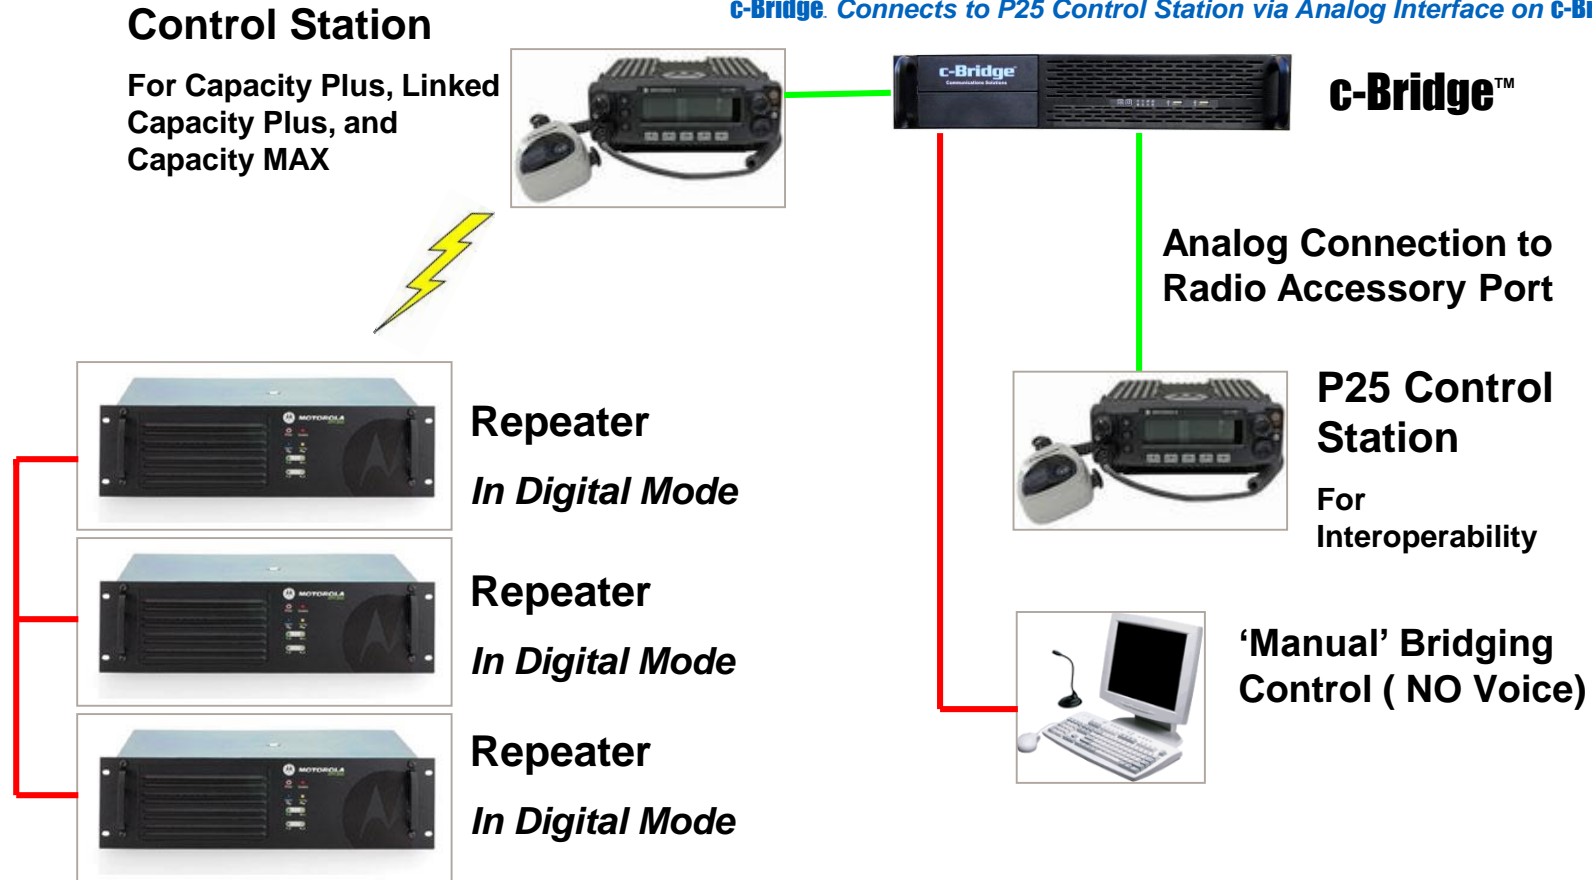

## System Example – Capacity Plus, Linked Capacity Plus, and Capacity MAX P25 Interoperability

**c-Bridge.** Connects to Digital Repeaters via Control Station Radio

**c-Bridge.** Connects to PC via IP Network Connections

**c-Bridge.** Connects to P25 Control Station via Analog Interface on **c-Bridge.**

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with non-**MOTOTRBO™** systems. NO data capabilities exist when bridging to non-**MOTOTRBO™** radio systems or consoles

# The c-Bridge™

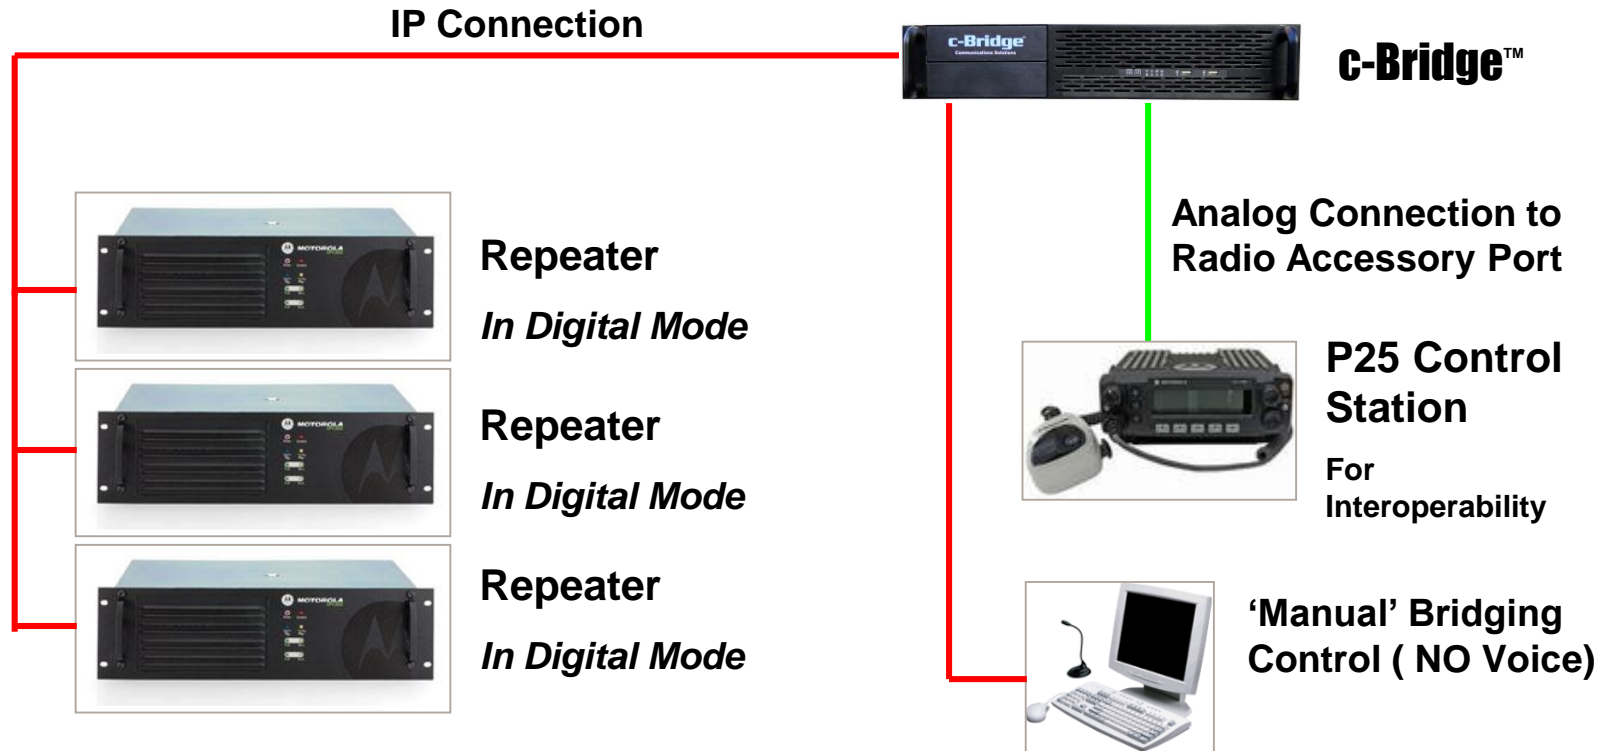

## System Example – Capacity Plus, Linked Capacity Plus, and Capacity MAX P25 Interoperability

**c-Bridge.** Connects to Digital Repeaters via IP Network Connections

**c-Bridge.** Connects to PC via IP Network Connections

**c-Bridge.** Connects to P25 Control Station via Analog Interface on **c-Bridge.**

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with non-**MOTOTRBO™** systems. NO data capabilities exist when bridging to non-**MOTOTRBO™** radio systems or consoles

# The c-Bridge™

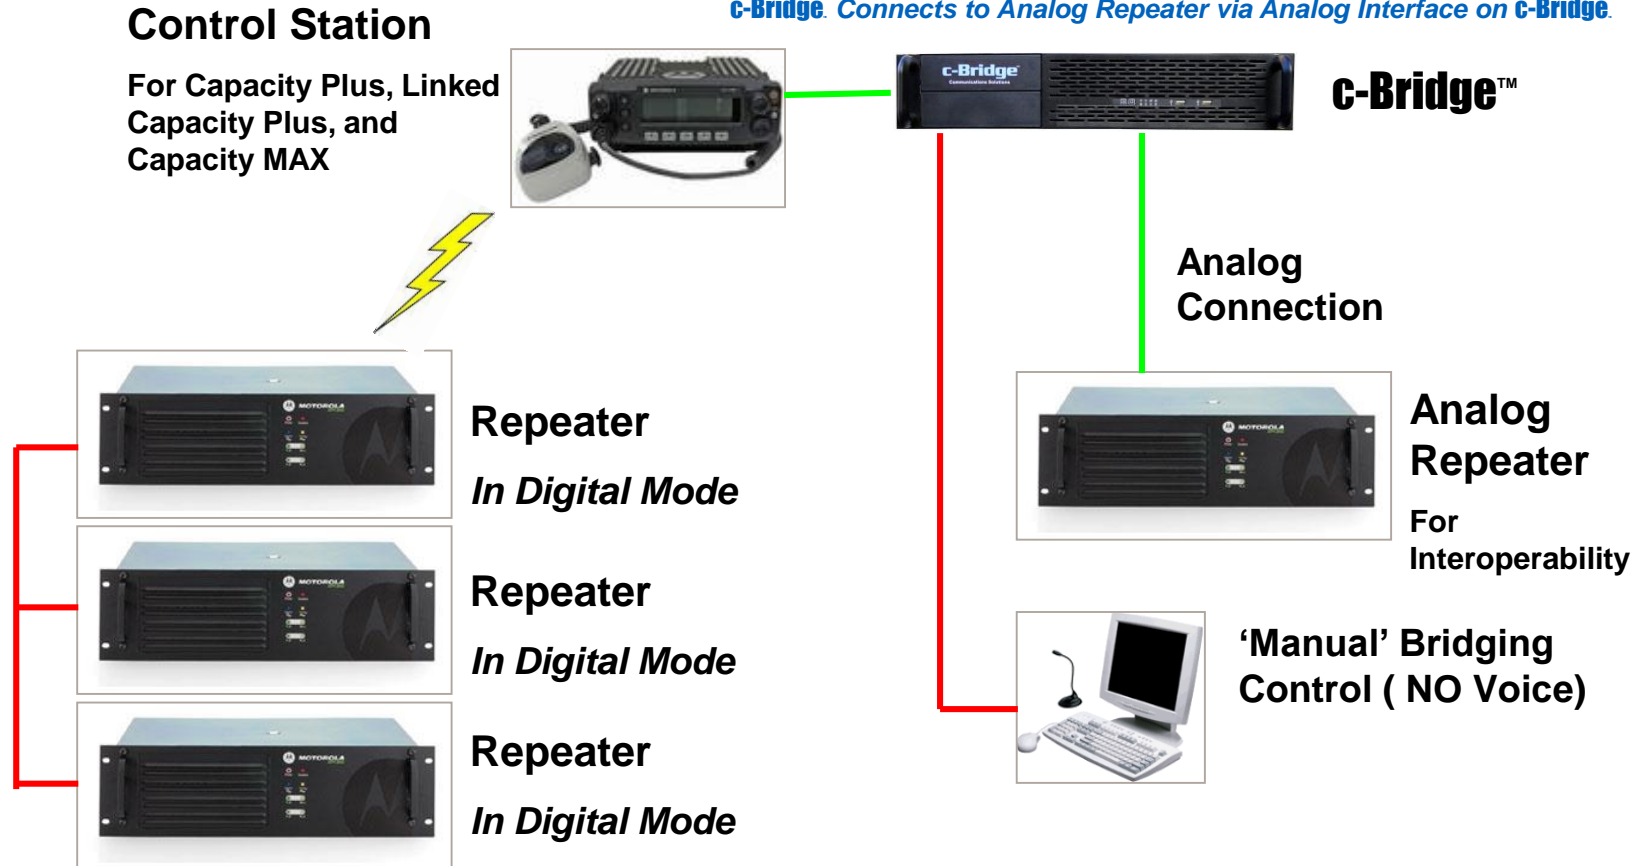

## System Example – Capacity Plus, Linked Capacity Plus, and Capacity MAX Analog Interoperability

**c-Bridge.** Connects to Digital Repeaters via Control Station Radio

**c-Bridge.** Connects to PC via IP Network Connections

**c-Bridge.** Connects to Analog Repeater via Analog Interface on c-Bridge.

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with non-**MOTOTRBO™** systems. NO data capabilities exist when bridging to non-**MOTOTRBO™** radio systems or consoles

# The c-Bridge™

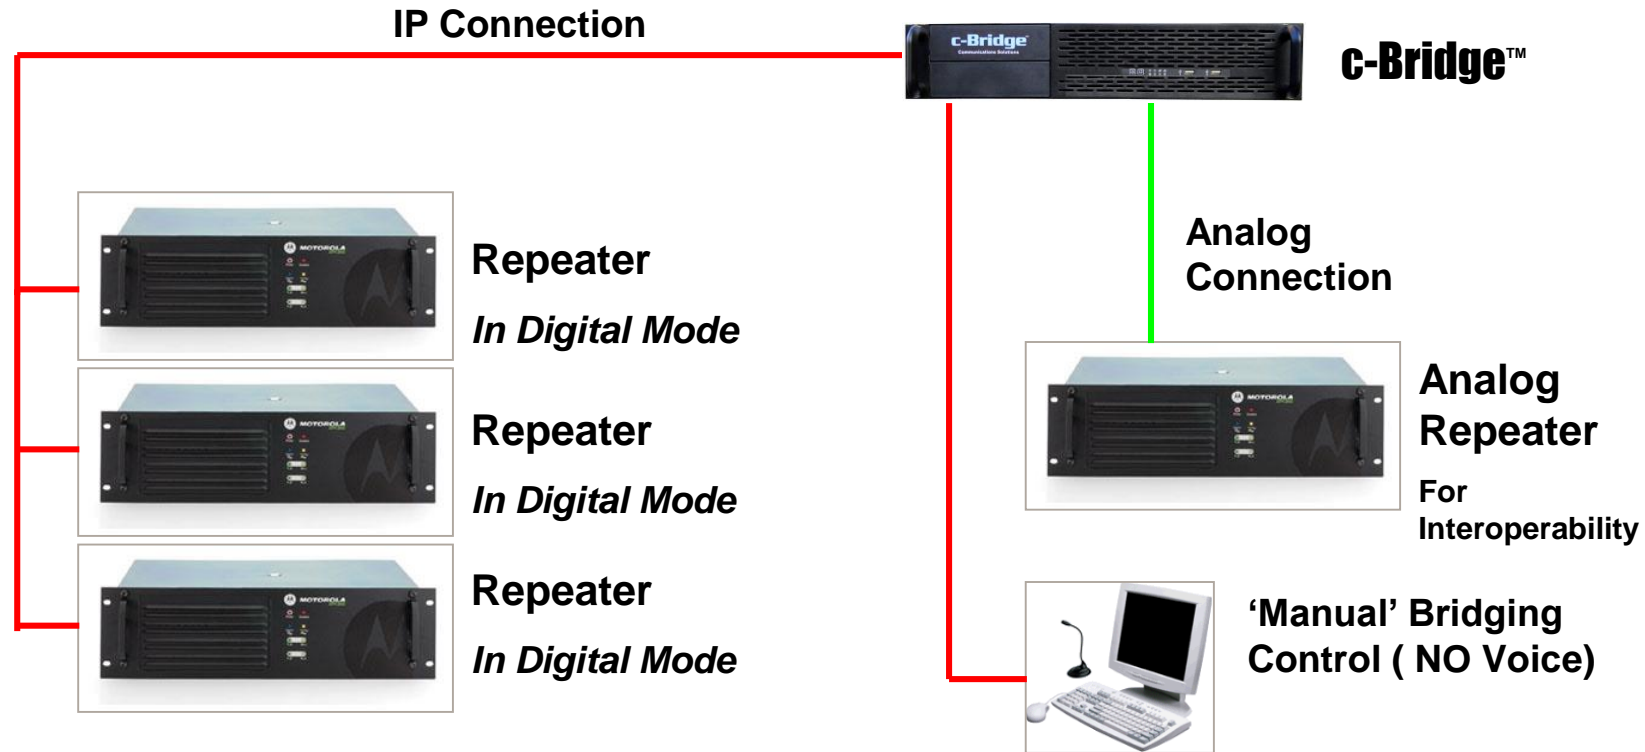

## System Example – Capacity Plus, Linked Capacity Plus, and Capacity MAX Analog Interoperability

**c-Bridge.** Connects to Digital Repeaters via IP Network Connections

**c-Bridge.** Connects to PC via IP Network Connections

**c-Bridge.** Connects to Analog Repeater via Analog Interface on c-Bridge.

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with non-**MOTOTRBO™** systems. NO data capabilities exist when bridging to non-**MOTOTRBO™** radio systems or consoles

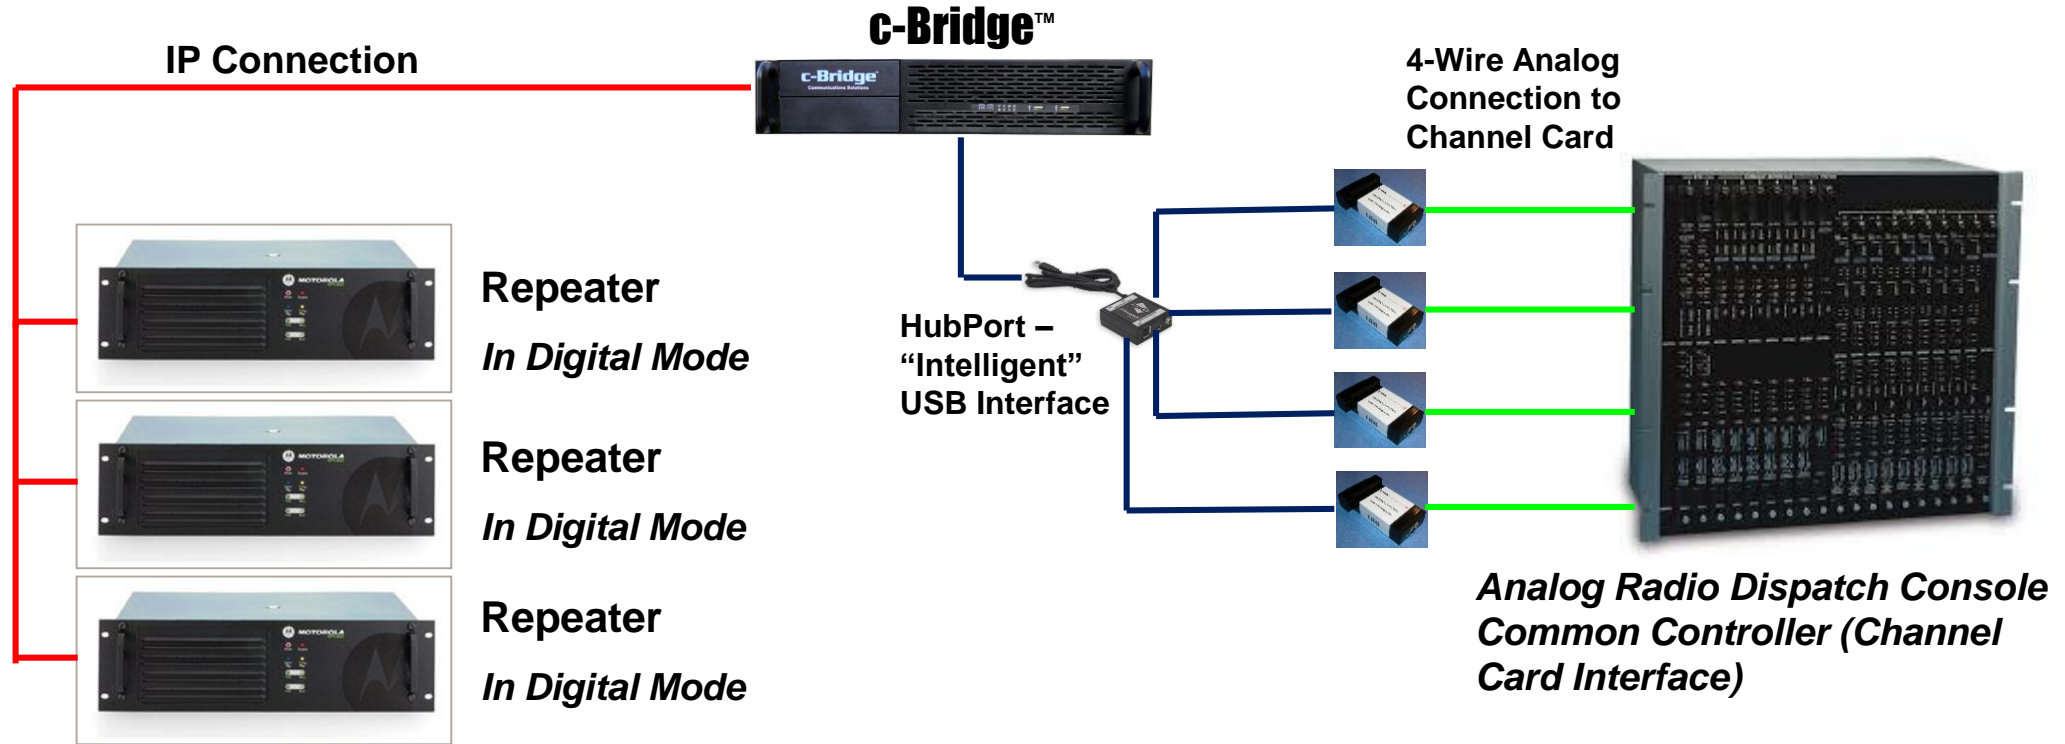

# The c-Bridge™

## System Example – Analog Radio Dispatch Console Systems

c-Bridge. Connects to Digital Repeaters via IP Network Connections

c-Bridge. Connects to Analog Console via Analog Interface on c-Bridge.

**NOTE** - The **c-Bridge™** Servers and Gateways pass Voice traffic **ONLY** when configured for Interoperability with analog radio dispatch consoles, such as the Zetron 400-series system.
